OBJECTIVE

Computer Science student at WPI with a strong foundation in Applied Mathematics, seeking Summer 2027 internships in Computer Engineering, Software Engineering, and Artificial Intelligence. Builds software ranging from low-level systems to full applications across Python, C, and data-driven systems, with an emphasis on correct, well-structured code — from implementing numerical algorithms from scratch to building tools that handle messy real-world input reliably. Has independently run an e-commerce business since 2022, developing the ability to ship, iterate, and own outcomes end-to-end.

EDUCATION

Worcester Polytechnic Institute — Worcester, MA

Aug 2025 – May 2029

Bachelor of Science, Computer Science (foundation in Applied Mathematics) | GPA: 3.84 (as of May 2026)

Activities: VEXU Robotics

Hopkinton High School — Hopkinton, MA

Graduated June 2025

GPA: 3.8

TECHNICAL SKILLS

Programming Languages: Python, Java, C, Swift, Racket, JavaScript

Web & Tools: HTML, CSS, Git/GitHub, responsive web design, serverless cloud deployment

Core Areas: Algorithms, mathematical programming, systems troubleshooting, hardware integration, technical documentation

SELECTED PROJECTS

Distributed Life-Safety & Special-Hazard Test Infrastructure

2026 – Present

- Integrated a Potter PFC-4410G3 multi-hazard releasing panel with a 10-amp PSN-106 remote power supply to create a distributed test architecture.
- Configured six independent Notification Appliance Circuits using hardware-level DIP-switch logic for specialized output patterns and synchronized strobes.
- Built dry-contact relay monitoring between panels and implemented cross-zoned control-by-event logic over Ethernet to simulate agent-release protocols.
- Performed end-of-line loop calculations, ground-fault isolation, and standby battery load testing to diagnose and validate system performance.

Reduced Row Echelon Form (RREF) Matrix Solver | C

May – Jul 2026

- Developed a C program that calculates matrix RREF using Gaussian elimination and documented the algorithm with worked examples and sample outputs.

GPA Calculator | Python

Feb – Apr 2025

- Built a Python application to calculate GPA from course grades and credits, applying structured logic, user input handling, and validation.

EXPERIENCE & LEADERSHIP

VEX Robotics Club, WPI — Build Team Member & Documentation Custodian

2025 – Present

- Support robot build activities while maintaining organized engineering notes on design decisions, build changes, testing results, and project progress.
- Preserve shared project knowledge to strengthen troubleshooting, design iteration, and collaboration across mechanical, electrical, and programming contributors.

Independent E-Commerce Seller — Self-Employed

Jun 2022 – Present

- Built and manage an online resale operation covering pricing, product listings, customer communication, inventory decisions, and order fulfillment.
- Generate approximately \$1,500–\$2,000 in sales every 90 days while responding to buyer inquiries within 24 hours and maintaining a strong customer experience.
- Apply entrepreneurial judgment, digital marketing, and analytical pricing decisions to improve product visibility and sales performance.
